

Engineered Aquaculture Solutions

FOR IMMEDIATE RELEASE

AEG FEEDER ORDERED FOR OPERATION IN NEWFOUNDLAND & LABRADOR

ST. ANDREWS, NB – 7 MAY 2009 – Aquaculture Engineering Group Inc. (St. Andrews, NB) announced today that it has signed a contract to deliver an *AEG Feeder* to an aquaculture company operating on the south coast of Newfoundland & Labrador. Feeder delivery will occur by early Fall 2009.

All *AEG Feeders* incorporate the AEG water borne feeding technology. *AEG Feeders* are capable of feeding up to 28 cages simultaneously for extended periods of time each day – essentially allowing the marine operator to use effective hatchery feeding strategies in grow-out cages. The specific feeder ordered has 90 metric tonnes of feed storage capacity and built-in electrical capacity to power cage lights.

“Receiving this order early in 2009 is indeed encouraging given the global credit situation,” states Chris Bridger, AEG General Manager. “Many fish farming companies have initiated a dialogue with AEG to acquire more efficient feeding solutions to minimize feed loss and help their bottom line.”

About AEG

The Aquaculture Engineering Group Inc. provides professionally engineered equipment and management solutions to the marine aquaculture industry, particularly those operations sited in medium- and high-energy environments. *AEG Solutions* must meet five sustainability criteria to ensure our product portfolio is: socially acceptable, cost-effective, eco-friendly, professionally engineered, and robust for survival. Our own line of innovative technologies coupled with those provided through strategic business partnerships allows AEG to supply turn-key systems that meet global client needs.
